## THEORETICAL TEST I ANSWER SHEET

## Multiple Choice Questions (each number = 0.5 point)

## Circle the corect answer

| No. |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| 1 | A |  |  |  |
| 2 |  | B |  |  |
| 3 |  |  |  | D |
| 4 |  | B |  |  |
| 5 |  |  | C |  |
| 6 |  |  |  | D |
| 7 | A |  |  |  |
| 8 |  | B |  |  |
| 9 |  | B |  |  |
| 10 |  | B |  |  |
| 11 |  | B |  |  |
| 12 |  |  |  | D |
| 13 |  |  | C |  |
| 14 | A |  |  |  |
| 15 |  | B |  |  |

$\qquad$
$\qquad$

## Short Question.

1. A and C
2. 

3. $\mathrm{V}=\frac{m}{\rho}=\frac{1000 \mathrm{~g}}{10.50 \mathrm{~g} / \mathrm{mL}}=95.238 \mathrm{~mL}$
4. a. $\frac{\text { Ozon concentration }}{\text { Pollution standard level }}=\frac{\mathrm{RPI}}{50}=\frac{85}{50}=1.7$

So, the concentration of ozon more than pollutant's standard level
b. $\frac{\mathrm{NO}_{2} \text { Concentration }}{\text { Pollution Standard level }}=\frac{\mathrm{RPI}}{50}=\frac{25}{50}=0.5$

So, the $\mathrm{NO}_{2}$ concentration $=0.5$ standard level $=0.5 \times 0.12=\mathbf{0 . 0 6} \mathbf{~ p p m}$ per hour
5. $\mathrm{P}=\frac{W}{\Delta t}$

$$
\begin{aligned}
& \frac{P_{A}}{P_{B}}=\frac{W_{A}}{W_{B}} \cdot \frac{t_{B}}{t_{A}} \\
& \frac{2}{1}=\frac{1000}{W_{B}} \cdot \frac{300}{200} \quad \longrightarrow \quad W_{B}=750 \text { Joule }
\end{aligned}
$$

## Theoritical Test II Answer Sheet

(answer the questions)

1. (2 Points)

- not biodegradable / not water-soluble / tend to be stored in fats hence accumulates in fishes or other aquatic organisms (eg. Plankton)
- Secondary consumer feeds on it and stores these pesticides
- tertiary consumer stores even more pesticides as it consumes much more to obtain more energy / due to $10 \%$ of energy transfer from one trophic level to another

2. $($ point 1.5 each $=0.5)$
A. Smooth Muscle Cell
B. Cardial Muscle Cell
C. Striated Muscle Cell

| Striated Muscle Cells <br> (0.25 point) | Smooth Muscle Cells <br> (0.25) | Cardiac Muscle Cells |
| :--- | :--- | :--- |
| Striated: packed with <br> orderly arrangement of <br> myofibrils (0.4 Point) | Not Striated: Fewer <br> myofibrils of varying <br> lengths | Striated: many myofibrils in <br> orderly arrangement (0.4 <br> Point) |
| Under control of nervous <br> system | Under control of nervous <br> and endocrine systems and <br> various chemicals and <br> stretching (0.4 Point $)$ | Under control of nervous <br> and endocrine systems and <br> various chemicals |
| Fatigue easily (0.4 Point) | Doesn't fatigue (0.4 Point) | Doesn't fatigue |

3. (point $\mathbf{1 . 5}$ each $=\mathbf{0 . 5}$ )
A. Mammals, they have mammary glands
B. They have hair on their body
C. They have poison to defense of their enemy
4. A. This reduces water loss because the lower surface receives less solar radiation than the upper surface

## B. Light/lightness.

Light conditions would generally result in the higher rate of transpiration.
Stomata are generally open in the light, and solar energy increases evaporation.
Dry environment.
A dry environment would result in the higher rate of transpiration because the water potential in the surrounding air would be lowest, resulting in more rapid
$\qquad$
Country: $\qquad$
evaporation.
Breezy conditions (Low wind movement).
Breezy conditions would increase the rate of evaporation of water from the surface of the leaves, lowering the water potential, and resulting in more rapid evaporation. However, if the plant is subjected to very high wind movement, the stomata may actually close, which prevents water loss.
5. A. ( $\mathbf{0 . 5}$ point) Harp spin, Dholpin, Rabbit, Dog, and Zebra
B. (0.5 point) Rabbit
C. (1 point) Harp seal leave in the cold environment
D. (1 point) Zebra leave in the dry environment and need instant energy
6. A. ( $\mathbf{0 . 5}$ point) Planaria
B. ( 0.5 point) Platyhelminthes
C. ( 0.5 point)

IMSO 2014
Bali, Indonesia - October 5-11, 2014

Name:
Country: $\qquad$
7. A. ( 0.75 point) $\mathrm{C}, \mathrm{D}$ and E

## B. (1.75 points)

## M NNNNNNNNNNN N

## X

8. A. (1 point) The biggest rotation is turbine (C)

## B. (1.5 points)

Because water is falling from a height of $h_{3}$ where $\boldsymbol{h}_{3}>\boldsymbol{h}_{\mathbf{2}}=\boldsymbol{h}_{1}$ ( $\mathbf{0 . 5}$ point) The velocity of rotation is depended on energy ( 0.5 point) which the highest potential energy, $\mathbf{E}=\boldsymbol{m g h}, \mathbf{( 0 . 5}$ point) is turbine ( C )
$\qquad$
$\qquad$
9. (3 points)

$$
\begin{aligned}
& I \propto \frac{1}{r^{2}} \rightarrow \frac{I_{1}}{I_{2}}=\left(\frac{r_{2}}{r_{1}}\right)^{2} \\
& I_{2}=I_{1}\left(\frac{r_{1}}{r_{2}}\right)^{2}=9\left(\frac{40}{60}\right)^{2}=4 \mathrm{Watt} / \mathrm{m}^{2}
\end{aligned}
$$

10. (3 points)
$\sum F=m a \rightarrow T-m g=m a$ or $T=m(g+a)$
So, $\quad m=\frac{T}{g+a}=\frac{180 \mathrm{~N}}{(10+8) m / \mathrm{s}^{2}}=10 \mathrm{~kg}$
11. A. (1 point) 4 forces: $F_{1}, F_{2}, W$, and $N$
B. (2 points)

$$
\begin{aligned}
& \sum F=m a \quad \text { (along X axis) } \\
\Rightarrow & a=\frac{\sum F}{m}=\frac{(75-45) N}{2}=\frac{30 \mathrm{~N}}{2 k g}=15 \mathrm{~m} / \mathrm{sec}^{2}
\end{aligned}
$$

## C. (2 points)

$$
\begin{aligned}
& V_{t}=V_{0}+a t \\
& V_{10}=0+15.10=150 \mathrm{~m} / \mathrm{sec} \text { to right ward }
\end{aligned}
$$

12. A. (1 point) electric dipole
B. (1 point) electrodes
C. (1 point) $\mathrm{X}=$ atrium contraction, $\mathrm{Y}=$ Ventricel contraction
D. (1 point) 80 beat/ minute
13. A. (1 point) Linear correlation
B. (1 point) to distinguish different species
C. (1 point) the density of air above the earth surface at night time is denser then at daylight
D. (1 point) poikiloterm, cold blood animal
$\qquad$

## Experiment 1

Answer Sheet

| Solutions | pH level | Number of Iodine <br> Drops | Vitamin C <br> Concentrations <br> $(\mathbf{m g} / \mathbf{m l})$ |
| :---: | :---: | :---: | :---: |
| Ascorbic acid |  |  |  |
| Commercial orange <br> juice |  |  |  |
